Contents AutoCAD Activation Code was one of the earliest widely used 2D CAD applications. It first appeared on desktop PCs in 1982. The earliest models supported the x86 series of microprocessors. These models could be bundled with one or more mice and keyboards. As the market grew, this version was improved with new models supporting different hardware (such as the Apple Macintosh), new features, improved performance and a 2D drafting capability, and was offered as a part of the Autodesk family of applications. It is possible to still use an older version of AutoCAD on the Microsoft Windows operating system. AutoCAD is one of the most successful CAD/Drafting software packages, and one of the most popular. Though technically a computer program, it has been described as a "drawing package". AutoCAD was developed in 1982 by Autodesk. Originally aimed at architectural drafters, AutoCAD has since grown into a comprehensive set of application tools, containing a robust, feature-rich 2D and 3D drafting and design software. Annotations Annotations and text are the first two core features of AutoCAD that most users typically set up. In the early 1980s, users were faced with many choices for applications that could be used to create or modify drawings. None of these products combined a variety of uses into a single package, even though users generally started with the same task on multiple occasions. To address this problem, Autodesk designed an architecture for the drawing software that would allow users to quickly and easily exchange parts of a drawing by use of the built-in feature of the software. In addition, the system was also designed to allow the user to add features to a drawing on-the-fly, without having to first re-draw the parts of the drawing that will be changed. This concept of "on-the-fly" editing is what is most commonly referred to as the "Annotation Function." The Annotation Function The key features of the Annotation Function were that the user could: Annotate a drawing at any time (not necessarily when the drawing is opened) Import text and shapes from other drawings or the clipboard, edit existing text, shapes, and drawings, and place them in any drawing Draw and place vector and bitmap objects, and convert them to text and shapes Add notes and other text to a drawing Draw and place text boxes, circles, polygons

Evaluation of a point-of-care test for *Toxoplasma gondii* antibodies in an equine population. To determine the sensitivity, specificity, and predictive values of a point-of-care test (ToxoScan) for determining the presence of *Toxoplasma gondii* antibodies in equine sera. Prospective study. 145 healthy equids (86 horses, 32 donkeys, 17 mules). Blood samples were collected from the jugular vein of 145 equids. ToxoScan rapid testing for the presence of *T. gondii* antibodies in sera was performed. Sensitivity of ToxoScan for detecting the presence of *T. gondii* antibodies in equine sera was 94.1% (38 of 40 equids), and specificity was 100% (115 of 115 equids). The positive predictive value was 100% (38 of 38 equids), and the negative predictive value was 97.8% (115 of 118 equids). Results of ToxoScan were not affected by presence of antibodies to other equine infectious diseases. A ToxoScan test can be used in place of the *Toxoplasma latex* agglutination test or a complement fixation test to evaluate for presence of *T. gondii* antibodies in
