When the client asks the server for information, the server is able to give the client the information it wants. The client software is installed on the machine running the computer. The server software is installed on the network, usually a local area network (LAN). A firewall could prevent access to the Data Management Server. The server runs on Windows. The client runs on Mac OS X. The client can run on any computer with an installed Java Runtime Environment. Since the server does not need to be running on a specific machine, the user can connect from anywhere. The user can log in from anywhere, where there is network connectivity. The software creates and maintains a database of project information. There are three user profiles. Each

Recent findings in a mouse model of red blood cell (RBC) sequestration due to adenovirus infection of reticuloendothelial cells indicate that early monocytoïd cells of the spleen are the major sites of sequestration and that the relative influence of the spleen and the liver on sequestration decreases as the infection progresses. To evaluate the relevance of the findings to human RBC sequestration, we examined the in vivo sequestration of human RBCs in three patients with severe RBC sequestration following transient chemotherapy-induced myelosuppression. In two patients with chronic lymphocytic leukemia (CLL), the splenic contribution to sequestration increased substantially during the first 3 weeks after chemotherapy, but thereafter, sequestration remained predominantly hepatic. In a patient with myeloid metaplasia, the extent of sequestration

Markup Import and Markup Assist: Rapidly send and incorporate feedback into your designs. Import feedback from printed paper or PDFs and add changes to your drawings automatically, without additional drawing steps. With improved Markup Import and Markup Assist functionality, you can now import digital documents, notes, and other file types with support for both AutoCAD and other CAD applications. You can also bring your AutoCAD document to life using Illustrator markers and adding annotations, while collaborating and approving changes via the cloud. Quickly send and incorporate feedback in real-time from any mobile device. Review and sign-off on individual views, and send the approved changes to the CAD system automatically, in a collaborative manner. Use the optional AutoCAD Annotations Viewer to add text, arrows, circles, and other enhancements to the drawing. Add review comments on viewports with support for Illustrator notes and comments (video: 2:28 min.). Simplified New Sheet: You can now load CAD files directly into a sheet in your drawing, as well as open multiple sheets. Fast analysis and reporting of sheet information is possible using the Sheet Collections feature. You can create groups of sheets to easily insert into your sheet tabs. You can now add your own templates for use with your sheets. Improved Sheets: The Sheets tool is now easier to use with the Quickly Add Sheets dialog. You can now add or remove sheets from a new drawing, open multiple sheets from a single drawing, and change the default settings for sheet prompts. Improved Sheet Manager: Select or deselect sheets in the Sheet Manager. Select sheets using any window on the drawing canvas. Select multiple sheets with the Select Sheet shortcut. Use the Sheet Manager for grouping, selecting, and numbering sheets, and performing other tasks. You can now move sheets around or copy a sheet to another location. Select the ActiveSheet property to update the ActiveSheet or perform other AutoCAD actions. You can now use the Sheet Manager to edit sheets. New Sheet Collections for Collection Groups: You can now create sheet collections for any collection group to easily select sheets that are organized into collections. You can create sheet collections for each page in a report or list. You can now export all sheets in
