Pi King is a lightweight and unassuming application that allows users to determine a high number of digits after the comma. There are many other apps and online tools that get this job done, however, they are not nearly as fast as Pi King. The app can calculate Pi with a maximum number of 8888999999 digits after the comma. It can be run directly on any Windows computer, just as long as .NET Framework 4.0 or higher is present on its system. It boasts a very simplistic GUI that allows users to enter the number of digits after the command. The GUI also displays the number of digits currently processed (via a simple progress/number bar) and the exact time spent performing the said calculation. The resulting number, as well as the time spent, are both displayed in a simple text document the application generates at the end of each session. All in all, Pi King is a handy, little app that will come in handy to all users who need a local solution for determining specific numbers of digits of the famous irrational number. Key Features: * Calculate Pi to a maximum of 8888999999 digits after the comma. * FAST: The software performs up to a 16x faster calculation than alternative online tools. * Simple and intuitive GUI. * Supports .NET Framework 4.0 or higher. * Language independent (except that it uses Windows system locale). * Lightweight and fast. * Documents the results and shows the time used in a way that is very easy to read. * XML and CSV output formats available. * The application has been tested in both English and Spanish versions of Windows XP, Windows Vista, Windows 7 and Windows 8. * The software is completely free, no cost required. * This is an offline software application, does not need Internet connection to work. * The application is Unicode compliant, so it can process numbers in languages other than English. * The application supports any language that can display scientific notation. * The application also supports numbers with negative sign. * The application can calculate numbers with an unlimited number of digits after the comma. * Supports the negative number too. * The application outputs the results to Windows text document. * The input number can be modified at any time (up to a max of 9 digits of precision). * The output can be viewed in a simple text document or saved as an.xml or.csv file. * The application does not use floating point

--removes trailing zeros from a number. --works with numbers of any length, not just with two digits. --works with numbers with decimal point, not just with digits. --works with negative numbers, not just with positive numbers. --works with numbers bigger than 12 digits. --makes no check of the accuracy of the input. --does not work with huge numbers. --works with any Unicode character (even with the ones starting with &). --does not work with symbols. --does not take input from the keyboard. --can be used as a function in other apps. --can be used to remove trailing zeros from a date. **PI_MASTER** Description: is a small Windows app that can calculate Pi using the Calculation Everywhere engine. It has a handy GUI that allows you to change the precision, set a date, set a new unit system, etc. **PI_MASTER** is a Windows application that runs on any Windows computer, with .NET Framework 4.0 or higher on it. **Python_Pi** Description: Python_Pi is a python script written by Peter Green to calculate the number Pi to a large number of digits. Python_Pi has an attractive GUI that allows users to configure and select the number of digits after the comma. It can work for any number of digits, even numbers of billions of digits! The number of digits after the comma is configurable and can be set at up to 10 digits. The number of digits before the comma is configurable and can be set at up to 10 digits. If the digits of Pi are configured to be 10 digits after the comma, then you may wish to set the digits before the comma to zero. Users may also select a number of digits for the date. **Rand_Pi** Description: The program is able to calculate a random number that would be Pi to a large number of digits. It is basically just a run of the program. **Rand_Pi** is a Windows application that runs on any Windows computer with .NET Framework 4.0 or higher on it. **Pi Calculator** Description: Pi Calculator is an easy to use windows based application that can determine the value of pi to a specified number of digits after the comma. To calculate Pi to a large number of digits (including zeros) - you will need to select your first number of digits before the comma. It is recommended that you select 81e310abfb

This Tool allows users to create their own keyboard shortcuts for actions that are typically performed by the mouse. This is very useful for those who spend most of their time using the mouse. MouseTool Screenshot: You need to be a member of Mouse Tool to add comments! My computer doesn't need it. (y) - click on the link above for the Mouse Tool download. Note: you will still need to have the software installed on your computer. Downloaded MouseTool Version 1.3.13.0 MouseTool -.NET Framework 4.0 or higher required Do you wish to download MouseTool? This is one of those great utilities that only you and your friends will use. We have provided a link below so you can do just that. Please feel free to download it for free. The copy of MouseTool that you are about to download is not a shareware application and is open-source. To ensure the safety of your computer we highly recommend that you check the MouseTool file against Viruses, Trojans, Dialers, Adware and other malicious programs. No worries, MouseTool has a clean reputation. This is another of those wonderful freeware utilities that you can use without any concerns. A few years ago, I came across a website where people write down their high scores from various activities and games on the Internet. It was amazing to me how people could learn how to play games or perform in front of a computer. Many websites allow people to share their high scores with other people. For example, we can go to freewin.com, type in our name and click on the button. A list of our previous scores appears. Some websites provide you with different ways to see these scores. You can filter your results by score, type, or country. In many cases, the scores are broken down by categories like sports, games, movies, and even music. Some websites do not provide many scores. Some websites do not even provide scores of themselves. Some sites provide scores from people around the world. All in all, there are many different websites that provide high scores that can be shared and have a great impact on one's overall self-esteem. I thought that these websites would be a great source for my nephew. He is not yet three years old, however, he is already starting to do better in school than his brother. He will be able to learn how to get

What's New in the Pi King?

Pi King is a lightweight and unassuming application that allows users to determine a high number of digits after the comma. There are many other apps and online tools that get this job done, however, they are not nearly as fast as Pi King. The app can calculate Pi with a maximum number of 8888999999 digits after the comma. It can be run directly on any Windows computer, just as long as .NET Framework 4.0 or higher is present on its system. It boasts a very simplistic GUI that allows users to enter the number of digits after the command. The GUI also displays the number of digits currently processed (via a simple progress/number bar) and the exact time spent performing the said calculation.
