Requires: Office 2007 or later While looking for a new design for my iPhone 5, I came across this app named UI Design Genius. This app was launched some time ago and was updated within the last month. I downloaded it and started testing it out. The app offers two main features. The first one is the ability to make your mobile device resemble other different types of devices. The second one is the ability to make your mobile device appear as a particular brand or company such as Samsung, Huawei, Apple, Nokia and Sony. The app provides different template designs and customization options that you can use to create a professional design that will fit your needs. I was not able to explore and test all the templates that were offered in the app. However, it did not take me long to find one that looks great and is really easy to use. A detailed template builder is featured on the interface. You can easily import templates and start customizing. The templates are organized into categories. You can save them on your device and share them through Facebook, Twitter or email. The graphics used in the app are of high quality. The app also allows you to edit and customize the shapes, graphics, colors and fonts as per your preference.
