AutoCAD Drawings and Drawings in 3D AutoCAD is a powerful drafting tool which allows you to create intricate 2D and 3D designs, including 3D models. AutoCAD's 3D functions are based on 3D CorelDRAW and other 3D products, and thus allow you to create detailed 3D drawings. 3D is useful for many different types of designs, including architectural, interior and exterior, engineering, automotive, and manufacturing. You can also use the 3D tools in AutoCAD to create 2D drawings, such as presentations, floor plans, and architectural plans. 2D Drafting AutoCAD is used to create designs in 2D drafting, which is the process of creating 2D design layouts. It is primarily used for architectural design and drafting. Drafting and Architectural Design AutoCAD allows you to create architectural designs in 2D. AutoCAD has been certified by CAD/CAM Accreditation Board (ACAB) and COMSIG (Certification Organization for Systems Integrators and Managers) is an association of companies selling software solutions, and the CACNA (Conference of Certification in Advanced Computer Aided Manufacturing), The National Institute of Standards and Technology (NIST), and the U.S. International Trade Commission (ITC) approve the manufacturing controls in compliance with ISO 9000 standards, which conforms to the requirements of the American National Standards Institute (ANSI). AutoCAD has a "full" certification from the ANSI Accreditation Board for Electrical Trade (ABET) for design, preparation, and final installation of electrical drawings. In addition, AutoCAD is widely used in construction. History AutoCAD LT 1.0 was introduced in August 1997, with the ability to read DWG files and CADML drawings. This product was developed for Microsoft Windows. AutoCAD 2007 (November 2006) was a major upgrade to AutoCAD 2005 with more functionality and features. Autodesk AutoCAD Win 2016 HotFix 1.06 KB Community Services Homelessness With an ongoing decline in funding for existing services, it is imperative that we ensure that all those at risk of homelessness and vulnerable in their lives, now and in the future, have access to the appropriate support. In 2012 there were at least 39,000 adults and children who were homeless and/or living in insecure accommodation (housing that is becoming increasingly unaffordable or they simply cannot stay in because of their housing needs). Not everyone experiencing homelessness is involved in the social care sector. Their specific needs are often not recognised or identified as being in need of support. That is why we are adding a specific focus to our Homelessness and Vulnerability Community Services We want to ensure that we have a clear understanding of the issues that homeless people face in terms of housing, housing affordability, health and wellbeing, gender and beyond, and what support is required. This understanding will help us to support people and ensure they have the services they need to recover, rebuild and thrive in their communities. The Community Services team has been working with people experiencing homelessness, working with the Trusted Outreach and our own staff, to understand and improve services we offer and make sure they are available to the very people we are trying to support. Homelessness Research and Policy Our work on homelessness is inter-disciplinary and inter-sectoral. We contribute to the national 'Homelessness and Vulnerability' and 'Housing, Health and Wellbeing' policy/research frameworks and knowledge exchange that are undertaken nationally. We are currently involved in projects with the following Government Departments to develop further evidence and influence policy and practice. We are also working with our partner organisations, such as the Association of Directors of Adult Social Services (ADASS), which is the leading professional body for social work and mental health services in England, and the Royal College
